Summary

Full stack developer with strong backend specialization in PHP Laravel and API driven systems. Experienced in building, maintaining, and optimizing web applications across business platforms, with a focus on clean architecture, performance, and reliability. Proven ability to deliver production ready features, troubleshoot complex issues, and collaborate in cross functional and remote environments. Skilled in translating business requirements into scalable technical solutions.

Area of Expertise

- Backend Development:** PHP Laravel, Python Django, RESTful API design, authentication and authorization, business logic implementation
- Frontend Development:** Vue.js, React.js, JavaScript ES6, HTML5, CSS3, responsive UI development
- Database & Data Handling:** MySQL, PostgreSQL, Firebase (Real-time Database, Firestore), relational schema design, query optimization, data integrity
- DevOps & Deployment:** Git, GitHub workflows, CI/CD fundamentals, Vercel, Render, Cloudways, Railway, Hostinger, Heroku
- System & Integration:** API integration, third party services, debugging across application and database layers
- Additional Technical Skills:** WordPress customization, Figma to code implementation, basic AWS familiarity (EC2, IAM, S3 Storage, RDS)

Professional Experience

Web Developer | IT Specialist

November 2024 – November 2025

Starlegends Adventures Inc. – Tacloban City

- Developed and maintained WordPress & Laravel based system supporting business workflows and user engagements.
- Designed and implemented PHP scripts and custom codes to support dynamic frontend interfaces and customized logic.
- Developed plugins that Tailored the Company System’s needs.
- Created and maintained IT documentation to enhance internal knowledge sharing.
- Troubleshoot application and database level issues, improving system stability and response time
- Designed and implemented modern, responsive web pages for engagement campaigns.
- Collaborated with stakeholders, and cross-departments to translate business requirements into technical solutions

Web Developer Intern

February 2024 – July 2024

SciBiz Informatics – Tacloban City

- Developed web applications using Python and Vue.js in a collaborative environment
- Integrated external APIs including BitCash for transaction-based systems
- Worked with Raspberry Pi for hardware software integration
- Strengthened experience in API communication and system level problem solving

Freelance Developer

December 2019 – June 2023

Remote | Work from Home (WFH)

- Delivered custom web systems using Laravel and Django with Vue.js or React.js frontends
- Built and deployed applications tailored to client requirements under constrained environments
- Designed APIs and handled full system lifecycle from development to deployment
- Developed desktop applications using Java and VB.NET

Project Highlights

Full Stack Business Platforms

- Developed dashboards, workflow systems, and engagement platforms using Laravel or Django and React or Vue
- Implemented API driven architecture and modular frontend components

API Integration Systems

- Integrated third party services and handled secure data exchange across systems

Hardware Integrated Applications

- Built systems connecting Raspberry Pi and Arduino devices with backend services using Python Django

Education

Bachelor of Science in Information Technology Leyte Normal University – Tacloban City, Leyte, Philippines	<i>June 2024</i>
Multi-Income Creating Project - ICT: Software Development Leyte Information Communication Technology Park – Palo, Leyte, Philippines	<i>May 2019</i>
